Physical health

Adolescence is a time of intense physiological change for young people.

Children who are happy, healthy and confident are better able to fully engage within their environment, helping them to fulfil their potential.

4 in 5
Year 8 and 11 students believe that they are in good health.

Source: Victorian Student Health and Wellbeing Survey 2014-2018

Achieving recommended health and fitness goals, and avoiding excessive sedentary behaviour, can promote better health outcomes for young people.

Fewer than 1 in 5
Year 8 and 11 students are meeting national guidelines for 60 minutes of physical activity per day.

3 in 4 Victorian students report that they are exceeding the recommended amount of two hours recreational screen time per day.

Source: Victorian Student Health and Wellbeing Survey 2018

Good nutrition supports body and brain development, aids concentration at school, and reduces the risk of health problems.

Diet

Around 3 in 5
Year 8 and 11 students meet national guidelines for fruit intake.

Only 1 in 10
Year 8 and 11 students meet national guidelines for vegetable intake.

Sleep is an important protective factor during adolescence, influencing young people’s wellbeing and academic performance.

Of the students who rate their academic ability as ‘good’ or better, fewer report sleep problems.

- 56% No sleep problems
- 46% Sleep is ‘a little bit’ of a problem
- 38% Sleep is ‘a lot’ of a problem

Of students with depressive symptoms, many report sleep problems.

- 40% No sleep problems
- 60% Sleep problems

The use of alcohol, tobacco or illicit drugs can have lasting consequences for a young person’s health, wellbeing and life outcomes.

The proportion of adolescent students who report recent regular consumption of an illicit drug, tobacco or alcohol has declined over the past five years.

**Social & emotional wellbeing**

Adolescence is a crucial period of neurological and social development.

**Connection & Satisfaction**

Connection to peers and life satisfaction are important contributors to adolescents’ wellbeing.

- More than 9 in 10 Year 8 and 11 students report feeling connected to their peers. 
- Around 2 in 3 are satisfied with their quality of life. This is a significant decline on 2014 levels.

*Source: Victorian Student Health and Wellbeing Survey 2018*

- Students who feel connected to peers: 93%
- Students who feel satisfied with life: 68%

**Bullying**

Adolescents who have been bullied or cyberbullied are more likely to be absent from school, and more likely to experience negative mental health outcomes.

- 1 in 10 Victorian Year 8 and 11 students were bullied in the previous term.
- 1 in 10 students were cyberbullied in the past year.

*Source: Victorian Student Health and Wellbeing Survey 2018*

**Resilience**

Resilience is an important protective factor for students’ wellbeing and academic performance.

- Around 3 in 5 Year 8 and 11 students report high levels of resilience – this is a significant decline on 2014 levels.

Mental health remains a challenge for many young Victorians. For adolescents, poor mental health can result in disruptions to school attendance and achievement, and challenges related to social development more broadly.

**Social & emotional wellbeing (cont’d)**

Poorest mental health can result in disruptions to school attendance and achievement, and challenges related to social development more broadly.

**Social & emotional wellbeing (cont’d)**

**Mental health services**

To be effective, mental health services should be appropriate to the needs of the young people receiving them, and correctly targeted to those most in need.

**Social & emotional wellbeing (cont’d)**

**Self-harm**

Rates of emergency department presentations for self-harm among adolescents have nearly doubled in the past 13 years, with the largest increases outside of the Melbourne Metro area.
The transition to secondary schooling in adolescence presents a range of new opportunities and challenges for young people, which require strong social and educational support systems—particularly for those with vulnerabilities.

Over the course of adolescence, young people make multiple transitions – from primary to secondary school, to further education or employment.

Almost 3 in 4 Victorian government school students in Year 7 were positive about their transition to secondary school.

More than 4 in 5 Victorian students completed Year 12 in 2017.

4 in 5 Victorians who left school before completing Year 12 went on to further education or employment in 2018.

Absenteeism increases steadily following the transition from primary to secondary school, peaking in Year 9, before declining in the senior secondary years.

Attitudes to school decline in secondary schooling, particularly for students in Year 9. Students’ positive attitudes are associated with higher engagement and achievement.

During the transition to senior secondary and post-compulsory schooling, adolescents exercise further autonomy and choice in relation to their academic progression, subject enrolments and school leaving destinations.

NAPLAN achievement in the top three bands is an important indicator of success at school.

Victoria remains a leading jurisdiction in NAPLAN achievement, outperforming the national average across all year levels in 2018.

Educational outcomes for Aboriginal students are improving.

Since 2008, the proportion of Aboriginal students achieving in the top three bands of Reading has improved for every year level.

Social norms and expectations can influence adolescents’ choices regarding future learning, including their choice of subjects.

In 2018 female students were:
5.5 x more likely to study Dance
3.3 x more likely to study Sociology
2.7 x more likely to study Health & Human Development and Literature

In 2018 male students were:
17 x more likely to study Systems Engineering
3.5 x more likely to study Physics
2.5 x more likely to study Product Design and Technology
Safe families & communities

Safe communities and supportive family environments are major protective factors in adolescence, enabling young people to achieve their potential while avoiding risks to their health and wellbeing.

Adolescents who believe their parents, close senior family members or guardians are there for them are more likely to have better health, be happier and do better at school than their peers.

Around 2 in 3 Victorian adolescents reported that they had a trusted adult in their lives.

Young people in regional areas (70 per cent) were more likely to report having a trusted adult, compared to those in metro areas (63 per cent).

Exposure to family violence in adolescence can be a traumatic experience, with strong potential effects on future wellbeing.

In 2017–18, 1 in 10 people affected by incidents of family violence were aged 10–19.

Half of all cases within this cohort, involved young women aged 15–19.

Safe families & communities (cont’d)

While conflict with family members can be a normal part of adolescent social development, serious family conflict can contribute to poorer physical and mental health outcomes.

**Around 1 in 3**
Year 8 and Year 11 students reported an experience of serious family conflict in 2018.

Conflicts were more likely to be reported by women and young people in one-parent families.

Risks to a young person’s safety expand from familial to community contexts during adolescence. Neighbourhood safety is a substantial factor in shaping the likelihood that an adolescent will be a victim or become involved in anti-social or illegal activity.

In 2018, almost 9 in 10 Year 8 and Year 11 students reported that they felt safe in their local neighbourhood.

Source: Victorian Student Health and Wellbeing Survey 2018

For children who cannot reside safely with their parents, care services can provide a turning point by providing stable and secure care, new opportunities and extra supports to help them recover and thrive.

The number of adolescents living in care has nearly doubled over the past ten years. Most live in home-based care settings rather than residential facilities.
