TRANSITION TO SCHOOL: Supporting children and families at risk of experiencing vulnerability

While most children experience a positive transition to school, around one in five children in Victoria are developmentally vulnerable on one or more domains when they start school (AEDC 2015). Children living in the most socioeconomically disadvantaged areas are more than twice as likely to be developmentally vulnerable than those from the most advantaged areas, and this gap is widening over time (DET 2017).

It is important to recognise that a lot can be done to counteract this disadvantage and strengthen the transition to school for all children, regardless of where they live and their circumstances.

DEFINING VULNERABILITY

Children experience vulnerability or are at risk of experiencing vulnerability:‘

‘if the capacity of parents and family to effectively care, protect and provide for their long term development and wellbeing is limited’ (Victorian Government 2013).

Stressors affecting a family or community may contribute to children being at risk of experiencing vulnerability, such as family stress, economic hardship, unemployment, homelessness, violence, alcohol and substance misuse, and mental health problems (Roberts, W 2015).

SUPPORTING THE TRANSITION TO SCHOOL FOR CHILDREN AND FAMILIES EXPERIENCING VULNERABILITY

Successful transitions occur when professionals build responsive and respectful relationships with children and families as well as with other professionals. Each family’s unique context shapes and influences these relationships. Some relationships will require more time and effort than others and this can especially be the case for children and families experiencing vulnerability or at risk of experiencing vulnerability.

Professionals work to develop reciprocal relationships, where they share their knowledge and expertise, whilst respecting and valuing families’ views. This mutual respect and trust characterises an authentic partnership with families.

This partnership allows families and professionals to work together to support continuous learning and development of children, as they transition between home, early childhood and school settings. Continuity enables children to form stronger attachments with familiar adults and learning environments. Through these secure relationships, children develop a sense of belonging, improve wellbeing and build resilience.

RAPID LITERATURE REVIEW

In September 2016, the Department of Education and Training commissioned the Australian Council for Educational Research (ACER) and the Brotherhood of St Laurence to undertake a rapid literature review (Kochanoff, A., Krakouer, J., Mitchell, P. & Trevitt, J. 2016). The aim was to identify an evidence base for

The signs of child vulnerability may include poor attendance at kindergarten or school, developmental delay for younger children or presentation at hospital for suspected abuse. The evidence shows that where there are multiple factors present, the chance a child is vulnerable increases (Roberts, W 2015).
The review focused on the transition support needs of the children most likely to be at risk of experiencing vulnerability, namely those who have experienced trauma, children living in out of home care (OOHC), refugee children, and children who experience intergenerational poverty.

The rapid literature review found that children at risk of vulnerability attend early childhood education and care (ECEC) and outside school hours care (OSHC) services at lower rates than their peers and have more complex support needs during the transition to school. Despite this, there is minimal literature regarding effective programs and strategies for supporting children and families at risk of experiencing vulnerability during their transition to school.

The review highlighted four key issues and priorities:

- Building partnerships with families experiencing disadvantage and vulnerability.
- Taking a transdisciplinary and holistic approach to transition.
- Professional learning for ECEC, OSHC and school professionals.
- Further research to address gaps in the evidence base.

The rapid literature review report, presents a selection of effective programs, practices and strategies for supporting children and families at risk of experiencing vulnerability during the transition to school. Many of these approaches are applicable for all children and families in their early years transitions.

**METHODOLOGY**

The practice review used both quantitative and qualitative methods to reflect the voices of professionals, teachers, and families on practices within ECEC services, OSHC and schools that support transitions for children and families in vulnerable circumstances.

Data collection consisted of a state-wide survey, focus groups and phone interviews across metropolitan, regional and rural areas in Victoria. A total of 309 survey responses were received from ECEC, OSHC and school professionals. In addition, 126 ECEC and school professionals and 19 family members participated in focus groups or interviews.

**PRACTICE REVIEW FINDINGS**

Eighty-three percent of survey respondents reported that they changed their approach to supporting transitions with children and families experiencing vulnerability.

Both the rapid literature review and the practice review highlighted the critical importance of the following approaches:

- Services and organisations working collaboratively, knowing and valuing each other’s remit, and sharing information to ensure families are adequately supported during transitions.
- Tailoring transition practices and approaches to the uniqueness and diversity of each family. Getting to know each family and their circumstances was considered important to making transition processes appropriate, accessible and responsive.
- Establishing partnerships with families that enable professionals to gather more information about each family and their situation as well as to make children and families feel valued informed and connected.
- Building professionals’ knowledge, skills and attitudes to work respectfully and effectively with children and families experiencing vulnerability.
• Further research and evaluation of programs and practices to determine the effectiveness of transition to school for children and families experiencing vulnerability.

“It’s about the interaction that you have with the family and the child. My personal feeling is the kindergarten teachers I’ve seen who’ve had a big success rate with these families they’ve just made a big fuss ‘it’s so good to see you, I’m so glad you could come today, anything we can do to help you with attendance’. Give them a ring and see how things are going. ‘What can we do to help you out?’ So you put it back on them and ask how we can support [them] rather than being judgmental about them.” (Preschool Field Officer)

The practice review report highlights a range of promising or effective practices and case studies in Victoria that support the transition to school for children and families experiencing vulnerability. While focusing on children and families experiencing vulnerability, these strategies can equally be applied to strengthen the transition to school process for all children and families.

For a summary of the patterns and trends in evidence-based transition programs and links to some useful resources see Appendix A.

OPPORTUNITIES FOR CONSIDERATION

Victoria’s Early Childhood Reform Plan provides a long-term vision to transform Victoria’s early childhood services into a higher quality, more equitable and inclusive system (DET 2017). The rapid literature review and the practice review both outline strategies and promising practices that can contribute to this vision.

The practice review identified the following opportunities for consideration by ECEC and OSHC services and schools to strengthen transition to school for children and families in vulnerable circumstances:

• Formal networks are established, or existing networks built upon, that collaborate around transition to school processes and practices for children and families experiencing vulnerability.

• Each network designates a ‘leader’ who can champion transition to school at network meetings.

• Evaluation processes are embedded in ECEC and OSHC services, schools and networks to identify evidence-based approaches to support the transition to school for children and families experiencing vulnerability.

• The revised Victorian Early Years Learning and Development Framework (VEYLDF) and Transition: A Positive Start to School Resource Kit is used more widely across sectors and Transition Learning and Development Statements are fully utilised by schools.

• There is a focus on building the capacity of staff working with children and families experiencing vulnerability, including attending evidence-based professional learning.

• Schools have a ‘key’ transition person/s to support each child and family experiencing vulnerability.

• Young children experiencing vulnerability are encouraged to participate in ECEC programs and services, for example in Early Start Kindergarten.

• ECEC and OSHC services, schools and networks understand the guidelines and protocols for sharing information to support children and families experiencing vulnerability transitioning across services and settings.

To find the full reports and other transition to school resources, including the Transition: A Positive Start to School Resource Kit and an extensive online appendix with links to further resources see: www.education.vic.gov.au/transitiontoschool
