Acknowledgments

The Department of Education and Training (the Department) acknowledges the expertise and commitment of teachers and school leaders in Victorian government schools who work to build teaching and learning excellence every day. We would like to thank school principals, teachers and departmental colleagues for their valuable contribution to developing this resource.

The Pedagogical Model is designed to support delivery of the Victorian Curriculum F-10 and the Victorian Early Years Learning and Development Framework. It draws from the current evidence base, including the following frameworks and initiatives:

- Framework for Improving Student Outcomes
- Australian Professional Standards for Teachers
- Literacy and Numeracy Strategy
- Practice Principles for Excellence in Teaching and Learning
- High Impact Teaching Strategies (HITS)
- Professional Learning Communities
- School Differentiation Model (School Strategic Plan, Annual Implementation Plan, Performance and Development Approach)
- New Pedagogies for Deep Learning Community of Practice.

Providing feedback
This resource is the result of generous collaboration among Victorian government school teachers and departmental colleagues. We intend to update the resource over time, and your contribution will help us make it more useful for teachers. Please send your comments and ideas to: professional.practice@edumail.vic.gov.au
Introduction

Teachers have a critical role in shaping the lives of their students. Victorian teachers work everyday to prepare our young people for a future which is characterised by dynamic change.

The Victorian Government is committed to providing every student with opportunities to achieve excellence in reading, maths, science, critical and creative thinking, and the arts. Our ambitious Education State targets focus our efforts on promoting excellence across the curriculum, on the health and wellbeing of students, and on breaking the link between disadvantage and student outcomes.

Our schools deliver this excellence through a focus on high quality teaching and learning. This is supported by the Victorian Teaching and Learning Model which includes the Pedagogical Model presented here. The Pedagogical Model builds on the improvement priorities of the FISO and aligns with the Literacy and Numeracy Strategy Phase 2: Achieving Excellence and Equity in Literacy and Numeracy. Together they reinforce our shared vision and language for school improvement. The Pedagogical Model embeds that vision and language in the classroom, where teachers create opportunities for students to reach their full potential, regardless of their background or circumstance.

Teachers and school leaders have told us they want resources that expand their conversations about effective teaching and learning. The Pedagogical Model follows their lead, it is adaptive and flexible, not prescriptive and linear, and it encourages teachers to move back and forth between the five domains as they respond to their students’ learning needs. The Pedagogical Model maps the five domains to the relevant Practice Principles and HITs, and creates opportunities for deep learning experiences.
While FISO focuses on school improvement, the new Pedagogical Model underpins teacher practice improvement, recognising the vital role teachers play in improving student outcomes.

The Pedagogical Model, as a part of the Victorian Teaching and Learning Model (p. 7), supports schools to build teacher excellence and instructional leadership. Combined with the Vision for Learning, Practice Principles for Excellence in Teaching and Learning (Practice Principles) and High Impact Teaching Strategies (HITS), the Pedagogical Model will stimulate discussions about current teaching practices in schools, help schools to build a high performance learning culture, and ultimately improve student achievement and engagement. By providing common language and guidance on improving the quality and consistency of teaching practice, the Pedagogical Model enables school leaders, teachers and students to foster shared leadership so that everybody contributes to co-designed and connected learning.

The Pedagogical Model defines what high quality teaching looks like. It is not a prescription for practice. It is a flexible model that can be readily modified for different school settings and learning areas. We encourage schools to take the lead in adapting the Pedagogical Model to their own school contexts so that it deepens their continuing endeavour to improve learning outcomes through a concerted focus on students’ needs, interests and abilities. Schools can use the Pedagogical Model immediately or can benchmark their current pedagogical models for efficacy and consistency.

### Why the Pedagogical Model?

In collaboration with Victorian teachers and school leaders, the Pedagogical Model has been designed to reflect the current evidence base and departmental initiatives, including FISO and the Performance and Development approach.

While FISO focuses on school improvement, the new Pedagogical Model underpins teacher practice improvement, recognising the vital role teachers play in improving student outcomes.

The Pedagogical Model, as a part of the Victorian Teaching and Learning Model (p. 7), supports schools to build teacher excellence and instructional leadership. Combined with the Vision for Learning, Practice Principles for Excellence in Teaching and Learning (Practice Principles) and High Impact Teaching Strategies (HITS), the Pedagogical Model will stimulate discussions about current teaching practices in schools, help schools to build a high performance learning culture, and ultimately improve student achievement and engagement. By providing common language and guidance on improving the quality and consistency of teaching practice, the Pedagogical Model enables school leaders, teachers and students to foster shared leadership so that everybody contributes to co-designed and connected learning.

The Pedagogical Model defines what high quality teaching looks like. It is not a prescription for practice. It is a flexible model that can be readily modified for different school settings and learning areas. We encourage schools to take the lead in adapting the Pedagogical Model to their own school contexts so that it deepens their continuing endeavour to improve learning outcomes through a concerted focus on students’ needs, interests and abilities. Schools can use the Pedagogical Model immediately or can benchmark their current pedagogical models for efficacy and consistency.

### The Pedagogical Model is...

- embedded in the Victorian Teaching and Learning Model that incorporates the Vision for Learning, Practice Principles and HITS
- focused on teacher practice as the main contributor to improved student learning outcomes
- improvement-focused to assist teachers with their professional learning, including designing their PD goals
- adaptive and can be modified to fit specific school and subject contexts
- flexible, so teachers can move in and out of different domains, depending on the context
- evolving and will be expanded through showcasing best practice across Victorian government schools

### The Pedagogical Model is not...

- a stand-alone resource
- a recipe for solving all problems in teaching and learning
- a tool for evaluating teacher performance
- a prescriptive model
- a linear model
- a static model

### What is new about the Pedagogical Model?

1. It builds on FISO, Practice Principles and HITS
2. It draws upon the current evidence base
3. It highlights best practice across Victorian government schools
4. It addresses planning, implementation and evaluation of learning programs
5. It incorporates student voice, agency and leadership
6. It explores deep learning and global citizenship
7. It includes partnerships with parents/carers
8. It focuses on reflection and professional learning
What is the Pedagogical Model?

The Pedagogical Model describes what effective teachers do in their classrooms to engage students in intellectually challenging work. It provides an overview of the learning cycle and breaks it down into five domains or phases of instruction: Engage, Explore, Explain, Elaborate and Evaluate.

The Pedagogical Model domains are elements of one complete model of teaching rather than separate, self-contained components. In some lessons, students will move through all five domains. In other lessons, teachers will naturally switch between domains in response to student needs and learning program requirements. The Pedagogical Model respects this kind of flexibility – it is not designed as a template for linear or prescriptive lesson plans.
How does the Pedagogical Model fit into the Victorian Teaching and Learning Model?

The Victorian Teaching and Learning Model brings FISO into the classroom, creating a line of sight between the whole-school improvement approach and classroom practice. It assists principals, school leaders, teachers, students and parents/carers to work together in strong, effective learning communities that create and sustain better outcomes for students. The Victorian Teaching and Learning Model allows teachers and school leaders to focus on high impact improvement initiatives and to drive those initiatives through evidence-based decisions about their teaching and student learning.

The Victorian Teaching and Learning Model consists of four components: the Vision for Learning, Practice Principles, Pedagogical Model, and HITS. These components have a common foundation: the FISO Improvement Model, the FISO Continua of Practice and the FISO Improvement Cycle. Each component articulates how FISO is enacted in teaching and learning.

The Pedagogical Model describes what effective teaching looks like in the classroom and helps teachers apply the Practice Principles.

The Victorian Teaching and Learning Model consists of four components: the Vision for Learning, Practice Principles, Pedagogical Model, and HITS. These components have a common foundation: the FISO Improvement Model, the FISO Continua of Practice and the FISO Improvement Cycle. Each component articulates how FISO is enacted in teaching and learning.

*The Victorian Early Years Learning and Development Framework (VEYLDF) is an essential resource for primary school teachers. Abilities Based Learning and Education Support (ABLES) is an essential resource for specialist school teachers.*
How is the FISO Improvement Cycle embedded in the Pedagogical Model?

The Pedagogical Model is focused on enacting the FISO priority area of Excellence in Teaching and Learning. When implemented together with the Practice Principles, the Pedagogical Model enables teachers to maintain a line of sight between their own professional development and school-wide improvement based on FISO. This linkage helps teachers set Performance and Development goals to address their professional learning needs and align them with broader school improvement goals specified in School Strategic Plans and Annual Implementation Plans.

The FISO Improvement Cycle is central to all pedagogical resources. It is particularly important for implementing the Pedagogical Model and consequently is embedded in the model. After unpacking the Practice Principles and engaging in reflection activities regarding current teaching practices across the school, teachers are encouraged to use the FISO Improvement Cycle and the Pedagogical Model to evaluate and diagnose issues, prioritise and set goals, develop and plan learning programs, and implement and monitor instruction. Exploring the interconnections between the FISO Improvement Cycle and the Pedagogical Model empowers teachers to see themselves as learners, to reflect on their practice, and to engage in professional learning.

Focus areas for using the FISO Improvement Cycle to support teaching and learning

**Evaluate and diagnose**
- What’s going on for our learners?
- How do we know?
- What does our evidence tell us?
- Where will we concentrate our energies to make the greatest impact on learning?
- How will we measure impact?

**Prioritise and set goals**
- How will we target our teaching to ensure we are meeting all students where they are AT and support where they need to go NEXT?
- What will we do that will have the greatest impact on student learning?
- What is currently working, what needs to change and how will we find out more?

**Develop and plan**
- How will we know along the way that our efforts are making enough difference to student progress?
Who is the Pedagogical Model for?

The Pedagogical Model opens discussions, invites observation and feedback, and encourages teachers to continually improve their practice. The teaching approach is expressed in the five Pedagogical Model domains with direct connections to the Practice Principles and HITS. In addition, the Pedagogical Model refers to ideas, values and evidence about teaching and learning.

Schools that are looking to:

- adopt a new pedagogical model
  - can use the Pedagogical Model as a part of the Victorian Teaching and Learning Model to develop a high performance learning culture and establish consistently high quality teaching practice across the school
- update the implementation of their current pedagogical model
  - can use the Pedagogical Model as a part of the Victorian Teaching and Learning Model to benchmark and improve the quality and consistency of teaching practice across the school

School leaders

Principals, Assistant Principals, Learning Specialists, Leading Teachers, Literacy Leaders and Professional Learning Community (PLC) Instructional Leaders can use the Pedagogical Model to support teachers in their professional development. It enables them to guide teachers’ reflections on their current teaching practices, to assist teachers in evaluating their performance against each domain’s Continuum of practice and to specify areas for improvement. School leaders can drive school-wide improvement by using the Pedagogical Model and other DET resources to refresh and deepen teachers’ pedagogical knowledge.

Prior to engaging with the Pedagogical Model, schools should undertake a reflection on their school-wide practice using the following Practice Principles and self-reflection tools:

- **Practice Principle 1**: High expectations for every student promote intellectual engagement and self-awareness
- **Practice Principle 4**: Curriculum planning and implementation engages and challenges students
- **Practice Principle 6**: Rigorous assessment practices and feedback inform teaching and learning

‘With a united and coherent emphasis on curriculum... instruction, and assessment, pedagogical synergy is created.’

Teachers

The Pedagogical Model places student learning at the centre of planning and implementation. It supports teachers to design engaging and challenging learning experiences through planned integration of curriculum, pedagogy and assessment.

Teachers build professional skills and knowledge around curriculum, pedagogy and assessment to continuously enhance their practice and improve student learning. Developing expertise across those essential interrelated components builds practice excellence.

The Victorian Curriculum F-10 defines the learning progressions that guide student learning growth. It is the role of teachers and school leaders to create engaging learning and teaching programs, drawing on their knowledge of local context, effective pedagogy and rigorous assessment, to ensure that students progress along this continuum.

PLCs provide excellent opportunities for teachers to use the Pedagogical Model in many contexts: to review their learning programs, to guide self-and group-reflection, to set professional development goals, and to plan and implement the specific steps that achieve those goals.

Using the Pedagogical Model, teachers can collaborate to consider the following elements as part of their planning, classroom practice and reflection:

### Preparing for the classroom

- Student learning needs
- Pedagogical knowledge
- Content knowledge
- Pedagogical content knowledge
- Victorian Curriculum F-10 / VEYLD/F
- Practice Principles
- HITS

### Reflecting on your practice

- Assess student learning progress and provide feedback
- Moderate student work with colleagues
- Use various types of evidence of student learning to inform the next planning cycle
- Undertake a reflection on your teaching practice using Diagnostic Tools for Practice Principles

How does the Pedagogical Model align with other DET resources and initiatives?

### Excellence in teaching and learning

**Excellence in classroom practice in literacy and numeracy**
- Pedagogical Model
- Practice Principles for Excellence in Teaching and Learning
- High Impact Teaching Strategies
- Literacy Teaching Toolkit: Birth–Level 6
- At a Glance: Literacy and Numeracy Teaching Resources

**Differentiating student learning needs**
- Insight Assessment Platform
- Formative Assessment Guide
- Annotated student work samples in reading and viewing
- Literacy Data, Assessment and Practice online course

**Enhancing student learning experiences**
- Mathematics Teaching Toolkit: Birth–Level 10
- Koorie English online teaching resources
- Literacy Teaching Toolkit: Levels 7–10

### Professional leadership

**Building instructional leadership in literacy and numeracy**
- Workshops for primary school Literacy Leaders

**Leading Effective Professional Learning Communities: Guidance**
- Bastow Leading Literacy for Networks program
- Workshops for primary and secondary Numeracy Leaders
- Workshops for secondary school Literacy Leaders

**Embedding a whole-school focus on literacy and numeracy**
- Catalogue of Programmatic Supports
- Guidance for secondary schools to lift literacy and numeracy outcomes

### Positive climate for learning

**Empowering students in their learning**
- Amplify: Empowering students through voice, agency and leadership

### Community engagement in learning

**Engaging families as partners in literacy and numeracy**
- Literacy and Numeracy Tips to Help Your Child Every Day: A guide for parents of children aged 0–12
- ‘Prep Bag’ books and family literacy and numeracy guidance
The Pedagogical Model domains explained

This resource unpacks the five domains of the Pedagogical Model as a separate section, allowing teachers to focus their efforts and engage deeply with each domain. In practice, the domains do not exist in isolation. Teachers will switch between domains in response to student needs and learning program requirements.

**Continuum of practice** illustrate varying levels of teacher practice for each domain, expressed through descriptions of proficiency. Descriptions specify increasing levels of sophistication and complexity of teachers’ actions before, during, and after the classroom implementation, as they are crucial to developing, implementing and improving learning programs. Teachers can use the Continua to reflect on their practice, make judgements about specific areas of teaching and set targets to move to the next level of proficiency. The Continua are closely aligned with the AITSL Classroom Practice Continuum, Australian Professional Standards for Teachers and Practice Principles.

**Resources** list key learning materials that teachers can use to increase their knowledge and build skills in each domain.

**Success indicators** describe behaviours that teachers and students may exhibit in relation to each domain. Examples provide a quick check for teachers and do not cover all domain aspects.

**Illustrations of practice** showcase best practice in each domain. Examples come from Victorian government school settings and include whole-school priority focus areas such as literacy and numeracy. These teaching stories demonstrate teachers’ thinking process and specific actions taken to help students achieve intended outcomes.

**Sample performance and development goals** offer teachers examples of strategically set goals at different levels of the Continua. The goals follow the SMART format outlined in the Goal Setting Guide for Teachers (DET, 2017). They show how the goals may differ at various levels of proficiency and in different domains. Sample goals emphasise the importance of collaborating with colleagues, students and parents/carers, and using different types of evidence when evaluating the effectiveness of teaching and learning. Teachers are encouraged to refer to their School Strategic Plans and Annual Implementation Plans when developing individual goals in alignment with the whole-school improvement strategies.

---

**Engage**

Teachers know their students well and engage them in building supportive, inclusive and stimulating learning environments. Teachers motivate and empower students to manage their own learning and develop agency.

**Continuum of practice**

Each level of teacher proficiency (1.0 to 5.0) may be described as: 1.0 (Novice), 2.0 (Proficient), 3.0 (Accomplished), 4.0 (Exemplary) and 5.0 (Proficient Lead).

**Resources**

- **Sample performance and development goals**
- **Illustrations of practice**
- **Success indicators**

---

**Sample performance and development goals**

**PRACTICE**

- Teachers create learning opportunities for students to develop self-awareness and independence.
- Teachers model and demonstrate how to evaluate learning.
- Teachers encourage students to set, pursue, and review learning goals.
- Students lead and manage their learning.

**ANDLE**

- Teachers involve students in planning and implementing learning activities.
- Teachers plan for diverse learning needs in whole-class and small-group contexts.
- Teachers support the learning of students with individual or group learning needs.
- Students participate in activities that are designed to enhance their learning.

---

**Illustrations of practice**

**SUCCESSFUL LEARNER**

- Teachers create learning opportunities for students to develop self-awareness and independence.
- Teachers model and demonstrate how to evaluate learning.
- Teachers encourage students to set, pursue, and review learning goals.
- Students lead and manage their learning.

**ENGAGE**

- Teachers involve students in planning and implementing learning activities.
- Teachers plan for diverse learning needs in whole-class and small-group contexts.
- Teachers support the learning of students with individual or group learning needs.
- Students participate in activities that are designed to enhance their learning.

---

**Success indicators**

- Students lead and manage their learning.
- Students are engaged in learning activities.
- Students participate in activities that are designed to enhance their learning.
- Students lead and manage their learning.

**PRACTICE**

- Teachers create learning opportunities for students to develop self-awareness and independence.
- Teachers model and demonstrate how to evaluate learning.
- Teachers encourage students to set, pursue, and review learning goals.
- Students lead and manage their learning.

**ANDLE**

- Teachers involve students in planning and implementing learning activities.
- Teachers plan for diverse learning needs in whole-class and small-group contexts.
- Teachers support the learning of students with individual or group learning needs.
- Students participate in activities that are designed to enhance their learning.
## Domains overview

<table>
<thead>
<tr>
<th>Domain</th>
<th>Practice Principles - Actions</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Engage</strong></td>
<td>Teachers know their students well and engage them in building supportive, inclusive and stimulating learning environments. Teachers motivate and empower students to manage their own learning and develop agency.</td>
</tr>
<tr>
<td><strong>Explore</strong></td>
<td>Teachers present challenging tasks to support students in generating and investigating questions, gathering relevant information and developing ideas. They help students expand their perspectives and preconceptions, understand learning tasks and prepare to navigate their own learning.</td>
</tr>
<tr>
<td><strong>Explain</strong></td>
<td>Teachers explicitly teach relevant knowledge, concepts and skills in multiple ways to connect new and existing knowledge. They monitor student progress in learning and provide structured opportunities for practising new skills and developing agency.</td>
</tr>
<tr>
<td><strong>Elaborate</strong></td>
<td>Teachers challenge students to move from surface to deep learning, building student ability to transfer and generalise their learning. They support students to be reflective, questioning and self-monitoring learners.</td>
</tr>
<tr>
<td><strong>Evaluate</strong></td>
<td>Teachers use multiple forms of assessment and feedback to help students improve their learning and develop agency. They monitor student progress and analyse data to draw conclusions about the effectiveness of their teaching practices, identify areas for improvement and address student individual needs.</td>
</tr>
</tbody>
</table>

This domain is demonstrated when students:

- feel valued and supported in the classroom as evidenced by their active participation in discussions
- actively engage in the learning process in the classroom and beyond
- feel comfortable and confident to provide feedback to the teacher regarding their learning experiences

This domain is demonstrated when the teacher:

- seeks information and feedback from students and parents/careers to create meaningful learning experiences for students
- links the new material to students’ prior skills and knowledge
- conveys high expectations for students through setting challenging but achievable goals and supporting students in learning
- is consistent in reinforcing rules and protocols

Sample performance and development goals

<table>
<thead>
<tr>
<th>PROFICIENT</th>
<th>LEAD</th>
</tr>
</thead>
<tbody>
<tr>
<td>By the end of this planning cycle, I want to have increased motivation among disengaged students in my class. To achieve this goal, I will use the FISO Improvement Cycle to plan my inquiry, identify possible causes of disengagement, design strategies for increasing motivation, and gather and interpret relevant data. To learn how to do this, I will use the FISO Improvement Cycle, Practice Principles and HITS to reflect on my current teaching and further my knowledge about student engagement. I will talk to students about their experiences in class to gather initial data on the reasons behind disengagement. I will work in a PLC to develop three strategies to increase student participation in class. I will test each strategy using the FISO Improvement Cycle, comparing notes with colleagues and adjusting my approach as needed. I will know I have achieved my goal when: • my learning program clearly outlines new strategies developed through this project • I continuously work with students and colleagues to adjust my approach and engage students • student attendance rates and achievement increase • peer observation, my observation, and student survey and interview data indicate improved student engagement in learning.</td>
<td></td>
</tr>
<tr>
<td>By the end of this planning cycle, I want to have helped other teachers improve their skills in using different types of data to assess student engagement in learning. To achieve this goal, I will facilitate discussions with colleagues to reflect on current practices of assessing student engagement. To learn how to do this, I will review research literature on the topic and use Practice Principles and HITS to develop teaching resources. Based on the identified areas for improvement, I will develop a short presentation and a list of resources to help my colleagues use the FISO Improvement Cycle when evaluating practice. I will lead my colleagues to collectively analyse available data, identify engagement issues, design strategies to remedy issues, and plan to collect new data. I will know I have achieved my goal when: • teachers collaborate to improve student engagement in learning • teachers’ learning programs clearly outline new engagement strategies • student achievement increases • peer observation, teacher self-reflection, and student survey and interview data indicate improved student engagement in learning.</td>
<td></td>
</tr>

SECONDARY – SCIENCE

At a large regional secondary school, five Year 7 Science teachers collaboratively identified the need to improve student engagement and stimulate student interest and curiosity in class. Teachers collaborated to develop a unit of work using the Rube Goldberg Challenge activity, introducing students to forces. Teachers minimised ‘chalk and talk’ and focused on student investigation, exploration, and collaboration. Implementing the unit required building on students’ interests and asking students to work in different learning spaces. At the beginning of the project, teachers explicitly taught students about collaboration – what it looks like and how it works.

Students worked in groups to create a machine using a chain reaction. To evaluate students’ prior knowledge, teachers asked students to complete surveys before starting their work. Survey items related to students’ expectations for the task and collaboration. Teachers engaged students to develop an assessment rubric and refine the criteria based on the design brief. The success criteria for the unit included: 1) construction of the machine; 2) accuracy of the machine when measuring time; 3) student collaboration; and 4) demonstrated understanding of the forces involved. In teams, students self-assessed against the first three task components. Teachers assessed the fourth component. To capture evidence of student learning, teachers used written tasks, took photos and filmed activities throughout the unit.

The project culminated in a competition day, with students showcasing their Rube Goldberg machines. Evaluation of the unit indicated that students were engaged and gained a deep understanding of the concept of forces. This exercise helped students and teachers become better collaborators and build a sense of community in the school. Students took ownership of the project and elaborated on their ideas in a supportive environment. Teachers gained valuable insights into students’ thinking and planning processes. The project outcomes demonstrated the importance of explicitly teaching both collaboration skills and subject content, and scaffolding the learning to support students as they moved from surface learning to deep learning.

The project culminated in a competition day, with students showcasing their Rube Goldberg machines. Evaluation of the unit indicated that students were engaged and gained a deep understanding of the concept of forces. This exercise helped students and teachers become better collaborators and build a sense of community in the school. Students took ownership of the project and elaborated on their ideas in a supportive environment. Teachers gained valuable insights into students’ thinking and planning processes. The project outcomes demonstrated the importance of explicitly teaching both collaboration skills and subject content, and scaffolding the learning to support students as they moved from surface learning to deep learning.
Teachers present challenging tasks to support students in generating and investigating questions, gathering relevant information and developing ideas. They help students expand their perspectives and preconceptions, understand learning tasks and prepare to navigate their own learning.

| By the end of this planning cycle, I want to have developed a variety of strategies to assess students’ prior learning and to have used this knowledge to set skill-appropriate learning goals for students. To achieve this goal, I will need to learn more about strategies to assess students’ prior learning and translate that information into setting new learning goals. To learn how to do this, I will collaborate with my mentor and engage with Practice Principles 1, 4 and 6, focusing on co-designing curriculum, aspirational goals and assessments with students based on their abilities and interests. I will work through HITS 1 (Setting Goals) and resources for the Explore domain listed in the Pedagogical Model resource. I will know I have achieved my goal when:
- my planning documents outline the steps I will take to review previous lessons, assess students’ current knowledge and skills, signpost new content, and explain learning activities
- feedback from students, received via surveys and interviews, indicates they understand learning goals and feel engaged in developing these goals
- feedback received from peer observations indicates improved student engagement in learning tasks
- student learning outcomes in my class improve |
| By the end of this planning cycle, I want to have helped colleagues in our PLC to improve student ability to explore ideas, examine biases, question each other’s points of view, and share their learning. To achieve this goal, I will lead colleagues through a collaborative project that supports teachers to create an authentic task focused on real-world problems, incorporating opportunities to examine multiple points of view. To learn how to do this, I will review HITS 5 and 6 (Collaborative Learning, Multiple Exposures), and work with teachers to identify opportunities for differentiating instruction and using ICT in their classrooms. Throughout the project, I will observe classrooms, provide tailored feedback to teachers, and support them to observe each other’s work. I will know I have achieved my goal when:
- teachers in the PLC have collaborated regularly to develop and deliver learning programs
- student feedback indicates that students feel confident to ask questions, hypothesise and speculate
- student learning outcomes improve across classrooms
- feedback received from peer observations indicates that students speak freely in classrooms, explore ideas, examine biases, question each other’s points of view, and share their learning
- teachers in the PLC report increased confidence in leading students on complex collaborative projects. |

Illustration of practice

PRIMARY – HUMANITIES, ENGLISH

At a primary school, Grade 5-6 teachers wanted to further develop students’ independence in learning. To achieve their goal, teachers designed a unit that allowed students to explore real-world issues, to generate and investigate questions, gather relevant information and develop ideas. The unit focused on the concept of consumer choices and their impact on local and global communities. The chocolate industry was the target of investigation. Starting with students’ current knowledge and interests, teachers and students worked together to establish learning goals and develop detailed assessment rubrics.

During the exploration stage, students worked in groups and conducted online research to investigate similarities and differences between fair trade and free trade practices in chocolate production, and the impacts of these practices. Teachers provided ongoing feedback to students, supporting them to define issues, compare and contrast information, and elaborate and evaluate their findings. Students chose companies that were not practising free trade or were not active enough in the fair-trade movement. They wrote to those companies, endeavouring to convince them to improve their practices. Teachers used the Structure of the Observed Learning Outcome (SOLLO) map to evaluate students’ learning progress as they moved from gathering facts to generating ideas, reflecting on their learning and creating arguments.

Students improved their skills in independent investigation through online research, class discussions, group work, simulations and visits from guest speakers. Student feedback indicated that working on a real-life problem increased their engagement and motivation on task. The collaborative set up of the unit helped students manage their own learning process as they worked toward set goals, and improved their communication and critical thinking skills. Students valued the support they received from peers and believed working in teams enhanced the learning process.
Teachers explicitly teach relevant knowledge, concepts and skills in multiple ways to connect new and existing knowledge. They monitor student progress in learning and provide structured opportunities for practising new skills and developing agency.

Sample performance and development goals

**GRADUATE**

By the beginning of Term 1, I want to have created a draft English language learning program (Year 5), using the Victorian Curriculum F-10 and incorporating fit-for-purpose formative and summative assessments.

To achieve this goal, I will work with content and pedagogical resources such as the Victorian Curriculum F-10, Victorian Teaching and Learning Model, and Literacy and Numeracy Toolkit.

To learn how to do this, I will work with my mentor to help me design units of work that build on students' expected knowledge at the beginning of Year 5. I will review the Victorian Curriculum Content Descriptions and Achievement Standards for English. I will work with Practice Principles 4 and 6 to ensure my thinking aligns with the expectations for excellence in teaching and learning. I will use my school's established lesson planning templates to plan my lessons and units, and will use the Pedagogical Model resource to enrich my learning program. I will work on HITS 8 (Feedback) to improve my skills in providing feedback to students through formative and summative assessments.

I will know I have achieved my goal when:
- my learning program documentation is completed and follows the approved format
- scope and sequence in my learning program is aligned with content of the Victorian Curriculum F-10
- assessment plans are clearly articulated in my learning program
- my learning program builds on Practice Principles and incorporates ideas from HITS and Pedagogical Model.

**HIGHLY ACCOMPLISHED**

By the end of this planning cycle, I want to have improved my skills in differentiating instruction and empowering students to contribute to the decisions about what and how they learn.

To achieve this goal, I will work to create authentic and meaningful learning opportunities for students that build on their needs, abilities and interests.

To learn how to do this, I will find out more about my students, their backgrounds, interests and needs. I will focus on Practice Principles 1, 2 and 9 which emphasise promoting student engagement in learning, creating supportive and collaborative learning environments, and enhancing student learning through collaboration with parents/carers. I will undertake Guided Teacher Self-Reflection Activities for Practice Principles 1, 2 and 9, use the Pedagogical Model resource and work with colleagues to investigate new ideas for differentiation in my classroom. I will work through the HITS 10 (Differentiated Teaching) to plan specific ways in which I can reach every student in my class.

I will know I have achieved my goal when:
- my learning program documentation clearly outlines plans for differentiated instruction, student participation in decision-making and ongoing monitoring of student learning
- student feedback collected through student surveys and interviews indicates that students feel engaged and empowered to influence what and how they learn in the classroom
- peer observation, teacher self-reflection, and student survey and interview data indicate that students' engagement, achievement and confidence in learning are improving.

### Sample performance and development goals

#### PROFICIENT

By the end of this planning cycle, I want to have further developed my students' independent inquiry and metacognitive skills.

To achieve this goal, I will learn more about preparing students for conducting independent inquiry, using different learning strategies, reflecting on learning and assessing the final product.

To learn how to do this, I will collaborate with colleagues in a PLC, reviewing Practice Principles 1 and 5, HITS 9 (Metacognitive Strategies), and working through the resource section for the Elaborate domain in the Pedagogical Model resource. In a PLC, and in collaboration with students, I will develop a learning program that incorporates a variety of teaching strategies and assessments. I will incorporate ICT into the program to enhance the flexibility of the learning process.

I will know I have achieved my goal when:

- my learning programs specify steps that students will take to develop their independent inquiry and metacognitive skills
- co-designed assessment tasks (including self-assessment) list explicit criteria
- peer observations indicate that students are actively engaged in the learning process, able to regulate their own learning, and confident to seek and provide feedback to each other
- students self-assess accurately, using assessment rubrics
- students select appropriate learning strategies from a wide repertoire, articulate next steps in their learning, and reflect on other aspects of their learning process through reflection journal entries.

#### LEAD

By the end of this planning cycle, I want to have helped teachers in my school advance students’ independence in learning and prepare them to undertake self-directed inquiry.

To achieve this goal, I will work with colleagues who have similar aspirations in a PLC.

To learn how to do this, I will facilitate PLC meetings to reflect on current practice, work through Practice Principles 1 and 5, and the accompanying Guided Teacher Self-Reflection Activities. We will focus on HITS 9 (Metacognitive Strategies) and the resource section for the Elaborate domain in the Pedagogical Model resource to develop shared understanding of the issues. As a PLC, and in collaboration with students, we will develop learning programs that incorporate a variety of teaching strategies and assessments. Teachers will incorporate ICT into their learning programs to enhance the flexibility of the learning process.

I will know I have achieved my goal when:

- teachers in our PLC co-develop learning programs that incorporate detailed assessment rubrics, which students can use to navigate their own learning
- peer observations indicate that students are actively engaged in learning, able to regulate their own learning, and confident to seek and provide feedback to each other
- students self-assess accurately, using detailed co–designed assessment rubrics
- students select appropriate learning strategies from a wide repertoire, articulate next steps in their learning and reflect on the learning process in reflection journals
- teachers feel capable and empowered to design independent inquiry units in the future.
Teachers use multiple forms of assessment and feedback to help students improve their learning and develop agency. They monitor student progress and analyse data to draw conclusions about the effectiveness of their teaching practices, identify areas for improvement, and address student individual needs.

**Continuum of practice**
Each continuum level of teacher proficiency assumes proficiency at the previous level.

</tr>
</tbody>
</table>

**Resources**
This domain is demonstrated when students:

- understand the connections between learning activities and assessment tasks
- understand the assessment criteria and what they need to do to progress their learning
- self-monitor their progress and provide evidence they believe demonstrates they have achieved their goals

This domain is demonstrated when the teacher:

- uses assessment tasks that allow students to demonstrate knowledge and skills at many levels
- supports further learning by providing regular feedback to students on their progress against individual learning goals and curriculum standards
- supports students to monitor their own learning and self-assess
- provides ongoing feedback to students about their performance through formative and summative assessments
- uses a range of evidence to monitor the effectiveness of learning programs in meeting student needs, and to establish challenging learning goals

Sample performance and development goals

<table>
<thead>
<tr>
<th>GRADUATE</th>
<th>LEAD</th>
</tr>
</thead>
</table>
| By the end of this planning cycle, I want to have improved my ability to provide feedback to students through formative and summative assessments. To achieve this goal, I will improve my knowledge and skills in providing different forms of feedback. To learn how to do this, I will work with a mentor and engage in professional learning. I will review Practice Principles 6 and 7, and work through HITS 8 (Feedback). I will explore AITSL videos and resources on feedback at https://www.aitsl.edu.au/teach/improve-practice/feedback. I will ask my mentor to observe my class and work with me to improve my ability to provide students with precise, timely, specific, accurate and actionable feedback. I will seek feedback from my students, Teacher Mentor and colleagues on my ability to provide feedback and will use their insights to improve my teaching. I will know I have achieved my goal when:
- formative and summative assessments are incorporated into my learning program
- my strategies for providing feedback are built on current evidence and feedback on my teaching
- my Teacher Mentor’s feedback indicates improvement in the quality of feedback I provide to students
- students report (via surveys and interviews) increased confidence in developing and undertaking learning tasks
- students can identify areas for improvement and articulate next steps to further their learning
- student learning outcomes improve. | By the end of this planning cycle, I want to have improved the consistency of the assessment practices in our school, using moderation. To achieve this goal, I will build teachers’ knowledge and skills in moderation, investigate current use of moderation in our school, and lead a moderation process. To learn how to do this, I will refresh my knowledge on moderation and review current evaluative practices at our school. I will engage with a PLC in this area of focus and conduct workshops to build my colleagues’ knowledge and skills in moderation. I will lead teachers in our PLC by organising and carrying out initial moderation and follow-up moderation activities. I will know I have achieved my goal when:
- teachers gain additional moderation knowledge and skills
- teachers collaborate to complete moderation processes
- follow-up moderation activity results indicate that teachers assess student work more consistently
- teachers report increased confidence in designing robust assessment rubrics for their classes. |

Illustration of practice

SECONDARY – DRAMA

Drama is a performance-based practical subject that makes it more difficult for teachers to objectively evaluate student performance. At a large metropolitan high school, drama teachers wanted to provide meaningful opportunities for personalised and differentiated learning, and improve student self-assessment and teacher assessment practices.

In collaboration, teachers revisited assessments that were developed to align with the Victorian Curriculum F-10 and mapped the key skills that needed to be assessed. Teachers worked with students to update assessment rubrics, discuss learning goals and develop self-assessment strategies. Students’ progress performances were filmed in many lessons and uploaded to the class page on the school Virtual Learning Environment. Within the dedicated reflection time at the conclusion of each lesson, students accessed their videos and undertook a self-reflection exercise online, assessing their performance against the assessment criteria and identifying the next steps in learning.

Teachers reviewed students’ performances and self-assessments after each lesson and used that information, in combination with their own assessment ratings, to inform future learning activities. For example, students who identified that they needed to work on characterisation or the use of stagecraft would commence the following lesson in a student-led mini workshop, utilising pre-arranged resources. Teachers rotated between groups, monitoring student learning and providing timely and constructive feedback.

Providing students with opportunities to self-assess and make decisions about their learning allowed students to use their time effectively to progress toward their learning goals. The ongoing partnership between teachers and students enhanced formative and summative assessment throughout the course. Students reported high confidence in learning, satisfaction with their progress and engagement with the course content.
Collaborative/cooperative learning

Collaborative/cooperative learning is an educational approach to teaching and learning that involves groups of learners working together to solve a problem, complete a task or create a product. Collaborative learning relies on students actively participating in negotiating roles, responsibilities and outcomes.

Curriculum standards

The Victorian Curriculum F-10 outlines curriculum standards which apply to students from Foundation to Year 10 in Victorian government schools.

Critical thinking

Critical thinking involves students learning to analyse or develop an argument based on the evidence, draw reasoned conclusions and propose solutions to problems.

Creative thinking skills

Creative thinking involves students learning to generate and apply new ideas in various contexts, seeing existing situations in a new way, identifying alternative explanations, and seeing or making new links that generate a positive outcome.

Deep learning

Deep learning occurs when students explore problems further by combining core academic content, higher-order thinking skills, and learning dispositions. When students are challenged to move from surface knowledge to deeper levels of understanding, they are more engaged and committed to extending and applying their learning.

Differentiated teaching

Differentiated teaching refers to methods and techniques teachers use to extend the knowledge and skills of every student in response to each student's starting point. The objective of differentiation is to lift the performance of all students, including those who are below and above year level expectations.

Domain

The Pedagogical Model domains describe five phases of instructional practice: Engage, Explore, Explain, Elaborate and Evaluate. Teachers will emphasise different domains at various times during lessons and units, and combine them in many configurations, depending on the demands of the class and students’ needs.

Early Years Planning Cycle (EYPC)

The EYPC outlines the process early childhood professionals use in partnership with children, families and other professionals to question and analyse, act and reflect on evidence they have collected about children from birth to eight years.

Feedback

Feedback describes various types of communication about learning to a student or teacher. Effective feedback is specific and constructive. It identifies strengths in the work being examined, highlights important areas to be developed and offers strategies for developing them. Students can provide feedback to their teacher by reflecting on the learning process and content, identifying issues and offering ideas. This feedback enables teachers to reflect on their practice and make changes to improve students’ learning progress and achievement. Teachers can provide feedback to students informally by guiding students’ work and answering questions to help them complete tasks, and formally by assigning marks, annotating student work and setting new learning goals with students.

Fit-for-purpose assessment

Fit-for-purpose assessment is designed to fit a specific purpose, and therefore can take many shapes. Assessment must be valid, reliable, transparent, flexible, authentic and manageable.

Formative assessment

Formative assessment is ongoing assessment integrated with the teaching and learning process for the purpose of improving learning. It incorporates all assessments made by teachers, students and peers that provide information about learner progress and achievement. Teachers use it to inform learning program adjustments that better meet the learner’s needs. Examples of formative assessment include moderation, feedback, hot-seat questioning, all-student response and question shells. Formative assessment focuses on evaluating where students are at, offers feedback to the student or the teacher, and guides lesson design and individual instruction.

Higher-order thinking

Higher-order thinking occurs when students combine facts and ideas, and synthesise, generalise, explain, hypothetise, make conclusions or interpret facts.

Learning goals

Learning goals are specific statements describing intended student attainment of essential concepts and skills. Learning goals are often used to distinguish between specific learning intentions and the overarching aims of a unit, subject or lesson.

Learning intention

Learning intention is a description of what students are expected to know, understand and do by the end of a lesson, unit of work or program. Learning intentions should be expressed in language students can understand. During the learning process, learning intentions are modified according to the learning achievement demonstrated by students. When developed in collaboration with the students, learning intentions help students take ownership of their learning.

Abilities Based Learning and Education Support (ABLES)

Abilities Based Learning and Education Support (ABLES) is a curriculum assessment and reporting tool that allows teachers to assess the readiness of students with disabilities to learn, generates reports that help to plan for personalised learning, provides guidance material and strategies to help teach students based on their individual learning needs, with links to the appropriate curriculum level and resources, and tracks student progress and achievement.

Assessment tasks

Assessments may be grouped into many categories. They can be, for example, formal or informal, diagnostic, formative or summative, written or verbal, project-based or process-based. Assessment tasks can vary from informal questioning during a learning activity to formal written tests at the end of a learning program. Assessments of all types provide evidence for the teacher to make decisions, preferably in collaboration with the student, about the next steps in the learning program.

Authentic assessment tasks

Authentic assessment tasks require students to demonstrate their ability to apply their knowledge and skills to problems that are either replicas of, or analogous to, the kinds of problems experienced in real-world situations.

Collaborative/cooperative learning

Collaborative/cooperative learning is an educational approach to teaching and learning that involves groups of learners working together to solve a problem, complete a task or create a product. Collaborative learning relies on students actively participating in negotiating roles, responsibilities and outcomes.
Pedagogical model
Pedagogical models are derived from learning theories that enable implementation of specific teaching and learning strategies. The Pedagogical Model incorporates theoretical foundation in the form of the Practice Principles, and demonstrates how teachers can use specific teaching and learning strategies articulated in the HITS.

Peer feedback
Peer feedback involves students in the process of providing feedback on each other’s work. Students discuss the extent to which each other’s work meets the success criteria and learning outcomes established by the class at the start of the learning process.

Peer observation
Peer observation is a developmental learning opportunity for teachers. It focuses on individual teachers’ needs and aims to support sharing of best practice and to build awareness about the impact of teaching. Integrating peer observation within existing structures, such as a School Strategic Plan, facilitates improved line of sight between personal and collective improvement goals. Guidance materials for conducting peer observation are available at http://www.education.vic.gov.au/school/teachers/teachingresources/practice/Pages/peerobservation.aspx

Practice Principles for Excellence in Teaching and Learning (Practice Principles)
The Practice Principles replace Principles of Learning and Teaching (PoLT). The Practice Principles articulate how teachers can deliver the curriculum to improve student motivation, engagement, and student learning outcomes. The Practice Principles are intended to guide teacher reflection and conversations about what they teach, the way they teach, and how they think about teaching.

Prior learning
Evidence of prior learning comprises the knowledge, skills and beliefs students bring to a learning task. Assessment provides teachers with evidence of prior learning and the information they need to set goals that offer each student the appropriate level of challenge.

Protocols
Protocols provide a structured process for interaction among participants: Classroom protocols must promote participation, ensure equity and build trust.

Real-world application
Real-world application refers to applying knowledge and skills, gained through school-based or individual study, in real-life contexts that extend beyond the classroom and school.

Rubric (assessment rubric)
A rubric describes the quality expected in a student’s response to a task. It may be the success criteria or an elaboration of them. A rubric is made known to the students before they attempt a task. It is discussed and may be negotiated to ensure student understanding of task requirements and to encourage student ownership of their learning. A rubric provides the standard against which students can evaluate and reflect on their performance and either continue with their learning strategies or modify them to improve their performance. A rubric ensures assessment is transparent and fair.

Shared norms
Shared norms are the rules a group uses to define appropriate and inappropriate values, beliefs, attitudes and behaviours.

Scaffolding
Scaffolding refers to a variety of instructional techniques used to move students progressively toward stronger understanding and, ultimately, greater independence in the learning process.

Self-assessment
Self-assessment occurs when students assess their own progress against the learning criteria and success criteria. Self-assessment encourages the learner to take ownership of their learning, they evaluate their progress or achievement and make adjustments to their learning strategies to improve their learning.

SMART Goals
SMART goal setting creates verifiable trajectories towards a certain objective, with clear milestones and an estimation of the goal’s attainability.

Teaching Strategies
Teaching strategies can be used within various pedagogical models. Teaching strategies determine the approach a teacher uses to achieve learning objectives. Examples of teaching strategies may be found in High Impact Teaching Strategies, Literacy Teaching Toolkit, and English as an Additional Language (EAL) strategies.

Timely feedback
When students are acquiring new, complex knowledge or skills, real-time checks can help them avoid developing misconceptions or incorrect practices.

Transfer
Transfer occurs when students are engaged in deliberately applying their knowledge and skills in varied contexts. Transfer helps students to make connections across subjects, and in out-of-school contexts.

Victorian Early Years Learning and Development Framework (2016)
The VEYLF (0-8 years) provides a common language to describe young children’s learning and practice principles to guide early years professional practice. It supports early childhood professionals, including early years primary school teachers working with children and families.

Worked examples
A worked example is a demonstration of the steps required to complete a task or solve a problem. Worked examples demonstrate what success looks like and how to achieve success. Thus, worked examples support skill acquisition and can be used as a teaching tool.
